

The new lighting legislation made easy.

A new twist has been added to the simple task of changing general service and reflector bulbs and it's coming soon. And for all of us - and the environment, it will be a turn for the better. The Energy Independence and Security Act of 2007 (EISA) is phasing out the iconic incandescent light bulbs and is requiring manufacturers to replace them with new, energy efficient bulbs that comply with EISA's mandated performance levels for incandescent and incandescent halogen bulbs.

The phase-out of the general service bulbs will begin January 1, 2012 starting with the 100W. The 75W will follow in 2013 and the 60W and 40W will follow in 2014. This means you have more efficient lighting alternatives such as the SYLVANIA Halogen SUPERSAVER, CFL and ULTRA LED bulbs.

A handy guide for the new lighting options.

Beginning January 2012, EISA legislation will phase out inefficient incandescent light bulbs resulting in significant national energy savings and a much reduced carbon footprint. This includes medium screw base general service and decorative bulbs. In addition, some reflector lamps will be phased out in July 2012.

OSRAM SYLVANIA is helping to make this transition an easy one by offering you a variety of bulbs to choose from. And we've created the chart below that shows what bulbs you need to replace and when, as well as the many replacement options that are available to you today. Don't wait. Start saving today.

General Purpose and Decorative Bulbs (medium screw base)
